# AMAWALK

# 1929

### How to Reach Amawalk

Amawalk is located in Westchester County, thirty miles north of New York City. The entrance to the Nursery is opposite the railroad station at Amawalk, on the Putnam Branch of the New York Central. This railroad connects in New York City with the Hudson River Division of the New York Central Railroad at High Bridge, and with the Sixth and Ninth Avenue elevated roads at Sedgwick Avenue. Amawalk is eight miles east of Peekskill on the Hudson River Division and five miles west of Katonah on the Harlem Division of the New York Central. The Nursery is located on the State Road from Briarcliff to Lake Mahopac. The main roads in every direction are State roads and motorists will find them in excellent condition.

# AMAWALK

---

JAN II 1917

In the year 1890 Major Orlando Jay Smith, founder and President of the American Press Association and active in public spirited movements of his time, found a hobby in the growing of the finest trees to their ultimate beauty.

His enthusiasm for the hobby led him all over the world, and his estate at Amawalk became the embodiment of his highest inspirations. With his passing, the estate, under the direction of his daughter, was continued until today it is represented by the Amawalk Nursery.

The fruit of his hobby was sought after and in time became available to friends and acquaintances, and later to communities, individuals and Landscape Architects. They recognize the vision and the ideal which, conceived many years ago, has reached its fulfillment in the millions of large sized specimen trees today available at Amawalk.

Amawalk has been developed on the ideals of its founder into the largest big tree nursery in the world. These ideals are still its inspiration.

# Good Trees and Bad Trees

*This article was written by Major Orlando Jay Smith,  
in November, 1908*

---

Men know that there are good furnishings and bad furnishings, good horses and bad horses, but they do not seem to understand so well that there are good trees and bad trees. As there are furnishings unfit for a respectable establishment, so there are trees that are not worth the planting. A very large proportion of the trees sold are of this poor kind. First-class trees are few, inferior trees are many.

Bad trees are usually crooked, forked or poorly rooted. Defective roots and branches generally result from crowding. Trees are planted so closely together in many nurseries that there is not sufficient room for the lateral development of roots and branches. The tree so grown is a slender "switch" of stunted appearance, faded foliage and poor vitality.

A forked tree is one that separates in two or more branches, having no commanding trunk. Even if it has a straight trunk and one large branch it is still a forked tree. The wind sways such a tree unevenly, and a crack in the fork results. The crack is produced when the tree is small, the rain enters the crack, and decay sets in. At a later time, usually when the tree has become valuable for shade or ornamental purposes, one of the branches will be torn off in a windstorm, and the tree will be hopelessly mutilated. The whole modern art of tree surgery has been invented to remedy these mutilations. If only good trees were planted there would be no need for "tree surgeons."

A good tree, on the other hand, has a strong trunk, single and straight, with many branches. It is symmetrical and handsome in form. These branch limbs are small in proportion to the main trunk and rarely crack. If they should be torn off in a storm the injury to the tree would be insignificant.

The nursery at Amawalk has been established for the purpose of producing specimen trees—that is, trees that are practically perfect, that will be useful and ornamental from the beginning, that will de-

velop rapidly and increase in beauty as they grow older, and, barring unusual accidents and diseases, will live until they die of old age, requiring no attention at any stage from the hands of a "tree surgeon."

Great care was exercised, to begin with, in the selection of the land for the nursery. It was chosen for its peculiar fitness for the growing of ornamental trees, which was demonstrated by its natural and artificial growth. The Norway Spruce, for example, is a tree which usually begins to deteriorate at the age of twenty-five or thirty years, in the neighborhood of New York. At Amawalk I have a number of Norway Spruces sixty-five years old which show no signs of impairment. Other trees—notably Maples, Larches and Elms—show the same virility.

To produce good roots and vigorous growth in our trees the ground is prepared for planting with much care. It is plowed and cross-plowed repeatedly. It is subsoiled and fertilized heavily. The trees, as soon as they are advanced in growth, are planted wide apart, giving them exposure to the sun and ample room for development. With such preparation and care trees grow vigorously and handsomely.

To produce straight trees without crooks or forks the young trees are inspected three or four times a year by experts. These experts prune off imperfect or badly formed branches and correct, by staking or otherwise, any inclination to crookedness or other ugliness in the tree.

Trees carefully grown in properly prepared soil develop very rapidly and experience no setback after transplanting. This is one of the advantages of buying well-grown trees. Growing rapidly, they quickly reach full development, rendering a long wait of years unnecessary.

By such constant care and interest we have been able to produce trees of greater strength, promise and beauty than are usually grown in nurseries. We are sure that all lovers of good trees will take pleasure in examining these specimens.

# AMAWALK TREES

Amawalk was established twenty-five years ago for the purpose of producing the finest large-sized ornamental trees that can be grown. It has since developed into the largest big tree nursery in the world.

## **Location**

The location for the Nursery was most carefully selected with regard to soils, exposures and shipping facilities.

## **Soils and exposures**

Amawalk has over 1000 acres of the most fertile land in the hills of Westchester County, thirty miles north of New York City. On our hills we have light, dry soils and exposed situations, and in the low lands rich, heavy ground and sheltered locations. Owing to these exposures and soils we are able to grow each kind of tree under the conditions most favorable to its development.

## **Climate produces hardy growth**

A more severe winter climate prevails at Amawalk than in New York City, due to an altitude of four hundred to one thousand feet, thereby producing a harder growth in our trees than would otherwise be possible. We grow only those varieties of trees which we have proved to be absolutely hardy.

## **Scientific development of Trees**

The most scientific methods are used in the development of Amawalk trees. They are continuously cultivated, top-pruned, root-pruned and transplanted. Every tree listed in our catalogue has been growing at Amawalk for from ten to twenty years, during which time it has been many times transplanted in order to obtain the fibrous root development necessary to withstand its final transplanting with the least possible setback.

## A M A W A L K   T R E E S

---

We do not offer any small-sized, immature trees for sale. Only those trees are catalogued that have received sufficient Amawalk training to enable them to assume the habits of the matured trees. The longer we grow our trees the finer they become; our 20 to 30 foot evergreens are heavier and older, and our 10 to 15 inch deciduous trees are more matured than are trees of similar size elsewhere.

The greatest care is taken in the digging and handling of our trees, so as not to injure either the root system or the branches. Our most experienced men are in charge of the digging, the balling and the loading of the trees.

No order is dug until just before the trees are to leave the Nursery. If the trees are to be delivered by truck, they are dug in the morning, loaded on the truck in the afternoon, and delivered as early as possible the next morning. When the order is to be shipped by freight, the trees are not dug until the freight car is on our siding.

An advantage of our location on the Putnam Branch of the New York Central Railroad is that our freight shipments to the North, South, East and West do not have to be routed through New York City. Our shipments to the West make Albany the second day after leaving Amawalk.

We guarantee that every tree leaving Amawalk is in the best condition obtainable with scientific care and handling. To obtain the best results, this tree has to be planted on the purchaser's grounds in the soil and exposure best suited to its variety. It has also to be properly planted and receive ade-

### **Only developed Trees offered for Sale**

### **Digging Trees**

### **Loading Trees**

### **Railroad shipments**

### **Planting Trees**

quate attention for the first year after transplanting or until its roots become re-established.

**Advice in regard  
to care of Trees**

Through a method of inspection of all trees planted within calling distance of Amawalk, we are in touch with the condition of each tree we send out and give advice in regard to its care. These inspections are made periodically, and a record is kept in our office. To those customers who live too far from our Nursery to get the benefit of this service we give our best advice by letter, and endeavor to have a representative inspect their trees once or twice a year.

**Advice in regard  
to planting**

To our customers we are glad to give, without charge, detailed instructions in the planting and care of their trees, as well as advice as to what varieties of trees will do best planted on their estate.

**Advice in regard  
to development  
of property**

We will, upon request, be glad to advise them as to how they can best obtain information as to the development of any part of their grounds.

A country place properly planted should increase yearly in value and beauty, and it is to this end that we are anxious to co-operate with our customers to obtain for them at an early date the full beauty and development of their trees.

# **Measurements, Prices, Delivery and Guarantee**

---

Deciduous trees are measured by their caliper, **Measuring Trees** diameter of the trunk 12 inches from the ground. As no two trees will make the same growth, the height of the deciduous trees is approximated in this catalogue as closely as possible. Evergreens are measured by their height only.

All trees listed in this catalogue measure up to **Specimen Tree standard** the highest requirements of specimen trees. No inferior trees are grown at Amawalk. The yearly output of Amawalk trees is about 20,000 specimens, to produce which number we have growing over 1,000,000 trees of all sizes.

We are always pleased to have customers visit **Selecting Trees** Amawalk and choose by tagging their own trees. As none but specimens are grown, customers are allowed to select any tree at the catalogue price for its variety and size. The price per tree is the same regardless of the quantity ordered.

The catalogue price of our trees includes their **Prices** proper digging, balling when necessary, and loading on trucks or in freight cars. All evergreens and certain deciduous trees (such as Beech, Dogwoods, and Hawthorns) are dug with a ball of earth around the roots. The balls of smaller sizes are secured with burlap, and the larger with a canvas bag and wooden platform. This insures the least possible disturbance of the roots.

**Deliveries**

The prices in this catalogue are f.o.b. Amawalk. Deliveries can be made by freight, express or motor truck. For freight shipment the cars are packed on our own siding. For less than carload shipment, packing is charged for at cost. For delivery by motor truck, cost price only is charged, this charge being based upon the size of the load and the distance it has to go.

**Guarantee**

We guarantee that every tree leaving Amawalk is in the best condition obtainable by scientific care and handling. If correctly planted in suitable location, and given adequate attention thereafter, they will live. As we have obviously no control over the treatment our trees receive after leaving our hands, we do not guarantee that they will live. To do so would mean increased prices and would place an unnecessary burden on those customers whose trees are properly cared for. However, to accommodate those purchasers who prefer their trees insured, we will for a pre-arranged premium agree to re-supply f.o.b. Amawalk any tree which fails to live one year after transplanting.

We are anxious to co-operate with our customers in making their planting a permanent success and will advise them about the care of their trees, either by letter or personal call, without cost for a period of one year.

**NOTE:**

*All photographs appearing in this catalogue were taken at Amawalk.*

An avenue at Amawalk of matched Pyramidal Silver Maples  
10 to 12 inch caliper, 30 feet high.

*Amawalk European Beech 8 inch caliper, 22 feet high,  
a valuable lawn tree.*

# Deciduous Trees

Namely, those that yearly drop their leaves

## Beech—*Fagus*

Amawalk Beech are dug with a ball of earth around the roots, secured with a canvas bag and wooden platform.

### EUROPEAN. *Fagus Sylvatica*

The time is coming when the value of the European Beech will be as greatly appreciated in this country as it now is in England, where it is one of the favorite trees for lawn and hedge planting. As a specimen it forms a large and majestic tree, with branches growing to the ground, in contrast to the maples, oaks and other high branched trees. For hedge planting it has no equal, making a beautiful, permanent and impenetrable barrier. The old leaves remain until they are forced off by the new ones in the spring, and it is therefore as useful as the evergreens for a screen during the winter.

## **Cercidiphyllum**

## JAPANESE. *Cercidiphyllum Japonicum*

This is a rare and interesting tree to plant for a low screen. It grows about twenty feet high and is symmetrical in form, with branches growing to the ground. Its greatest beauty is the foliage. In the spring the young leaves are copper-colored and in the autumn they turn to unusual shades of purplish red and yellow.

	Each
10 ft. high	\$50.00
11 ft. high	60.00
12 ft. high	75.00
13 ft. high	90.00

## Dogwood—*Cornus*

Amawalk Dogwoods are dug with a ball of earth around the roots, secured with a canvas bag and wooden platform.

## WHITE-FLOWERING. *Cornus Florida*

The most valuable of our flowering trees, being equally beautiful in the spring and fall. The large white blossoms appear in May and during the late summer and fall the berries and leaves turn a brilliant scarlet.

	Each
8 ft. high	\$30.00
9 ft. high	40.00

7 in. cal., 23 ft. high . . . . .	130.00

*Amawalk Norway Maple* 10 inch caliper, 32 feet high, the most satisfactory deciduous tree for general planting.

**Maple—Acer**NORWAY. *Acer Platanoides*

The Norway Maple is one of the most satisfactory trees for either street or lawn planting. It grows rapidly in even the poorest soil and most exposed situations, and suffers practically no setback after transplanting. It forms a large tree with a spreading head and deep green leaves which remain on the tree until November. The only condition in which the Norway Maple will not thrive is in wet ground. There it is safer to plant the Sugar or Silver Maple.

	Each

**Maple—Acer**

[Continued]

**GLOBE-HEADED NORWAY.** *Acer Platanoides Globosum*

An unusual grafted form of Norway Maple. These are splendid specimens with dense, round heads of compact growth. They are very effective in formal planting as a substitute for the more common Catalpa Bungeii.

4 to 7 foot stems.

	Each
4½ in. cal., 10 ft. spread . . . . .	\$65.00
5 in. cal., 14 ft. spread . . . . .	80.00
5½ in. cal., 15 ft. spread . . . . .	100.00
6 in. cal., 16 ft. spread . . . . .	125.00

**SCHWEDLER'S NORWAY.** *Acer Platanoides Schwedleri*

A variety of the Norway Maple with very brilliant coloring. The foliage in the spring is blood-red, turning later to a rich, dark green.

	Each
6 in. cal., 20 ft. high . . . . .	\$70.00
6½ in. cal., 21 ft. high . . . . .	85.00

Aerial view of about 100 acres

Amawalk is located in the hills of Westchester County, thirty miles north of New York City, in the midst of the estate country between Long Island Sound and the Hudson River. Bordering Amawalk on the east is the Putnam Division of the New York Central Railroad, while Peekskill, on the Hudson River Division, and Katonah, on the Harlem Division, lie eight and six miles to the west and east. Situated on one of the principal State Roads of the county, Amawalk is easily accessible from all points.

*f our 1000 acres at Amawalk*

*Amawalk was established twenty-five years ago for the development of specimen ornamental trees; twenty years ago the first tree was offered for sale. A more severe winter climate prevails at Amawalk than in New York City, due to an altitude of four hundred to one thousand feet, thereby producing a hardier growth in our trees than would otherwise be possible. Thus the successful transplanting of our trees is assured even to the severe winter conditions prevailing from Boston to Wisconsin.*

## Japanese Maple—*Acer Palmatum*

The Japanese Maple forms a small low-branched tree, growing not more than twenty feet high. It is extensively used for its brilliant coloring and is most effective when several specimens are massed together.

Amawalk Japanese Maples are dug with a ball of earth around the roots, secured with a canvas bag and wooden platform.

### OSAKAZUKI. *Acer Palmatum Osakazuki*

The best variety to plant for fall coloring. The leaves are green in the summer and become bright red in the autumn.

	Each
8 ft. high	\$40.00
9 ft. high	50.00
10 ft. high	60.00

*American Pin Oak 10 inch caliper, 32 feet high, the most rapid growing of the Oaks.*

**Oak—Quercus**

It is generally considered that the Oaks are of very slow growth, and for that reason they are not planted as extensively as their beauty and vigor merit. This is a mistaken idea. The Oaks here catalogued make nearly as rapid growth as, for example, the Sugar Maple.

**AMERICAN PIN. *Quercus Palustris***

The most rapid growing of the Oaks. It is a very beautiful variety, distinguished by its long, somewhat drooping branches. The foliage is deeply cut and turns orange and scarlet in the fall.

GLOBE. *Thuya Globosum*

A dwarf, globe-shaped variety, useful for planting in borders.

	Each
2 ft. high	\$15.00
2½ ft. high	20.00

Red Cedar

Siberian Arborvitae

Juniper Pfitzeriana

Juniper Stricta

Hemlock

Blue Cedar

*Evergreens are being extensively planted for their valuable place in  
the winter landscape.*

## Arborvitae—Thuya

[Continued]

**SIBERIAN.** *Thuya Occidentalis Wareana*

A very hardy variety of compact growth and dark green coloring.

	Each
5 ft. high . . . . .	\$35.00
6 ft. high . . . . .	50.00
7 ft. high . . . . .	70.00

## Hemlock—Tsuga

**HEMLOCK SPRUCE.** *Tsuga Canadensis*

A graceful and beautiful evergreen. Very ornamental when planted singly, and as it stands close shearing it also forms a splendid hedge. It is the only evergreen that can be grown in a partial shade.

We can supply Hemlocks in the following sizes, either closely sheared for formal effects and hedge planting, or with their natural open growth.

	Each
6 ft. high . . . . .	\$25.00
7 ft. high . . . . .	40.00
8 ft. high . . . . .	55.00
9 ft. high . . . . .	70.00
18 ft. high . . . . .	200.00

26 ft. high	300.00
27 ft. high	325.00
28 ft. high	350.00
29 ft. high	375.00
30 ft. high	400.00

**BLUE CEDAR.** *Juniperus Virginiana Glauca*

Similar to the Red Cedar, but of an unusually beautiful violet blue color.

	Each
7 ft. high	\$30.00
8 ft. high	35.00
9 ft. high	40.00
10 ft. high	50.00

## Juniper—*Juniperus*

*[Continued]*

### *PFITZER'S. Juniperus Pfitzeriana*

A low growing form, with spreading branches. The foliage is bluish green.

	Each
2 ft. high . . . . .	\$15.00
2½ ft. high . . . . .	25.00
3 ft. high . . . . .	40.00

### *SAVIN. Juniperus Sabina*

Deep green foliage and spreading form. Valuable for planting in front of taller evergreens and for use in a border.

	Each
2 ft. high . . . . .	\$15.00
2½ ft. high . . . . .	25.00
3 ft. high . . . . .	40.00

### *STRICTA. Excelsa Stricta*

Upright, pyramidal form, with bluish green foliage.

	Each
3 ft. high . . . . .	\$25.00
3½ ft. high . . . . .	30.00
4 ft. high . . . . .	40.00
4½ ft. high . . . . .	55.00
5 ft. high . . . . .	70.00

## Larch—*Larix*

### *CHINESE GOLDEN LARCH. Pseudolarix Amabilis*

One of the finest trees grown. A rare variety of Larch that develops into a large spreading tree of great beauty. The foliage turns to a rich shade of burnt orange in the fall.

	Each
16 ft. high . . . . .	\$275.00
17 ft. high . . . . .	300.00
18 ft. high . . . . .	325.00

***Pinus Strobus Umbraculifera***

A dwarf Pine which grows in the form of the Mugho but has the light green foliage of the White Pine.

	Each
2½ ft. high . . . . .	\$15.00
3 ft. high . . . . .	20.00

**Retinospora—Chamaecyparis**

The Retinosporas are very decorative evergreens suitable for formal gardening.

**FILIFERA**

A low, spreading variety with fine, bright green foliage.

	Each
3 ft. high	\$20.00
4 ft. high	30.00
5 ft. high	40.00
6 ft. high	50.00

**FILIFERA AUREA**

The golden form of the above. It keeps its brilliant coloring throughout the year.

	Each
2 ft. high	\$20.00
3 ft. high	30.00

**PISIFERA**

Forms a medium sized tree, graceful and open in contour.

	Each
5 ft. high	\$40.00
6 ft. high	50.00
7 ft. high	60.00
8 ft. high	70.00
9 ft. high	85.00
10 ft. high	100.00

*Colorado Blue Spruce 20 feet high, hardiest of the Spruces.  
Valuable for its form and color.*

*Amawalk Norway Spruce 25 feet high, extensively used for Living Christmas Trees when planted in sheltered locations.*

A M A W A L K   T R E E S

## **Retinospora—Chamaecyparis**

[Continued]

## PISIFERA AUREA

The golden form of the above. The new growth is a rich, golden yellow, changing later to a greener shade.

PLUMOSA

The hardiest of the green Retinosporas. Will stand close shearing.

	Each
3 ft. high	\$25.00
4 ft. high	30.00
5 ft. high	40.00
6 ft. high	50.00

PLUMOSA AUREA

The finest golden evergreen for formal effects. Our specimens are closely sheared in round or pyramidal form.

	Each
8 ft. high	\$70.00
9 ft. high	85.00
10 ft. high	100.00

### SILVER. *Retinospora Squarrosa* Veitchii

Of a rich silvery blue color and makes a beautiful contrast with the green and golden tints of other varieties.

## Spruce and Fir—*Picea* and *Abies*

### COLORADO BLUE. *Picea Pungens Glauca*

Grown on its own roots. It is a vigorous, compact tree, symmetrical in form and beautiful in color.

	Each
15 ft. high	\$120.00
16 ft. high	130.00
17 ft. high	140.00
18 ft. high	150.00
19 ft. high	165.00
20 ft. high	180.00
21 ft. high	200.00
22 ft. high	225.00
23 ft. high	250.00
24 ft. high	275.00
25 ft. high	300.00
26 ft. high	325.00
27 ft. high	350.00
28 ft. high	400.00
29 ft. high	450.00
30 ft. high	500.00

### COLORADO GREEN SPRUCE. *Picea Pungens*

Differs from the Colorado Blue in its coloring, and has a valuable place in landscape work as the pleasing shade of green harmonizes with other evergreens.

	Each
14 ft. high	\$125.00
15 ft. high	150.00
16 ft. high	175.00

Douglas Fir

Norway Spruce

Koster Blue Spruce

Colorado Blue  
Spruce

*American Arborvitae 8 feet high, valuable for formal planting.*

*An order of evergreens ready for shipment.*

## Spruce and Fir—*Picea* and *Abies*

[Continued]

### KOSTER BLUE. *Picea Pungens Glauca Kosteri Compacta*

A grafted form. The foliage is a more brilliant blue than that of the Colorado.

	Each
15 ft. high	\$150.00
16 ft. high	175.00
17 ft. high	200.00
18 ft. high	225.00
19 ft. high	250.00
20 ft. high	275.00
21 ft. high	300.00
22 ft. high	325.00
23 ft. high	350.00
24 ft. high	375.00
25 ft. high	400.00
26 ft. high	425.00

### CONCOLOR. *Abies Concolor*

The Silver Fir. A rare and beautiful evergreen of compact growth, with flat foliage of a silvery green.

	Each
16 ft. high	\$175.00
17 ft. high	200.00
18 ft. high	225.00
19 ft. high	250.00
20 ft. high	300.00

### DOUGLAS. *Abies Douglassi*

A fine, rapid growing, hardy tree from the Rocky Mountains. It has soft, bright green foliage.

	Each
9 ft. high	\$40.00
10 ft. high	50.00
11 ft. high	60.00
12 ft. high	75.00

## Spruce and Fir—*Picea* and *Abies*

[Continued]

### WEEPING DOUGLAS. *Abies Douglassi Pendula*

Weeping variety of the Douglas Spruce. A slender, drooping tree.

	Each
13 ft. high	\$175.00
14 ft. high	200.00
15 ft. high	250.00

### NIKKO. *Abies Homolepis (Brachyphylla)*

A hardy variety, distinctive for its rich green foliage and upright growth.

	Each
10 ft. high	\$85.00
11 ft. high	100.00
12 ft. high	115.00
13 ft. high	130.00

### NORWAY. *Picea Excelsa*

A popular and inexpensive evergreen which grows rapidly and will thrive in exposed situations.

We can supply Norway Spruce in the following sizes, either closely sheared for formal effects and hedge planting, or with their natural open growth.

	Each
22 ft. high	\$200.00
23 ft. high	225.00
24 ft. high	250.00
25 ft. high	275.00
26 ft. high	300.00
27 ft. high	325.00
28 ft. high	350.00
29 ft. high	375.00
30 ft. high	400.00
31 ft. high	425.00
32 ft. high	450.00
33 ft. high	475.00
34 ft. high	500.00
35 ft. high	550.00
36 ft. high	600.00

## **COLLECTED TREES**

WE ARE WELL EQUIPPED WITH BIG TREE MOVING MACHINES  
AND ARE GLAD UPON REQUEST TO GIVE QUOTATIONS  
ON SUPPLYING AND MOVING THE FOLLOWING COLLECTED TREES  
UP TO 25 INCH DIAMETER OF TRUNK AND FROM 20 TO 80  
FEET IN HEIGHT,

*American Elms*

*Sugar Maples*

*Red Cedars*

*American White Birch in clumps*

We can also supply for our customers

*old specimen boxwood*

*native Mountain Laurel*

*native Rhododendrons*

# Amawalk Tree Food

Trees used to beautify lawns, parks and streets lack the needful food supplied through the decay of organic matter in their natural environment. This malnutrition produces thin foliage, yellowish and undersized leaves, gradual dying off and a general unhealthy appearance. It leaves the tree open to excessive damage by insects or disease.

For several years Amawalk has been carrying on extensive research work in the development of a proper tree food. Trees must have a well balanced food for proper growth and development. After years of experimental work, we have formulated the perfectly balanced tree food.

The AMAWALK TREE Food is a balanced ration, scientifically blended, combining certain ingredients that offer immediate nourishment and others that gradually become available through the action of soil bacteria.

We recommend using the AMAWALK TREE Food from early spring as soon as the ground can be worked until about the middle of August when the growth of the roots should cease for the year. Usually about one pound of tree food is needed to every inch of trunk circumference of the tree. A tree 12 inches in diameter will need about 36 pounds of AMAWALK TREE Food distributed in an equal number of holes around the spread of the roots of the tree.

Further information will be sent upon request.
